## Insertion of the website URL into the CSV (Car Stats Viewer)

Example: https:/www.mywebsite.de/xyz/

1. Push on the gear

2. Scroll up the page and find API-Settings

## 3. Select HTTP Webhook

4. Insert your URL without any mistakes

BasicAuth is not needed or can be filled with any words

5. Go back to main settings and find the bottom line where the red arrow points at – push there ... this is Maxi's secret button for the debug log

h/Dist	anz als Verbrauchselline.	
tando	rterfassung	
Autom	atischer App-Start	
Sonstige Einstellungen:		
anl	Hauptansicht	
	Fahrzeugeinstellung	
Car Sta	ats Viewer Version 0.24.0 (com.ixam97.carStatsViewer)	
٨	-21° + 83 -	1

6. Here you can see if the webhook works properly (this is the data connection to your website)

This looks fine. Otherwise you see error messages.

```
Pebug

```

Note: this can take time and nerves until it works.

Or maybe this is my very personal experience.
